

Mason Lee Bell

Full-Stack Unreal Engine Developer · Systems Engineer & Lead QA

Austin, Texas · masonbell929@gmail.com · kazperkreative.com

PROFESSIONAL SUMMARY

I architect the pipelines, manage the backend data, and fine-tune the microscopic details that make an experience feel incredible. As a highly versatile UE5 developer, I adapt to exactly what the project demands — from bespoke C++ features and overarching gameplay logic to complete technical QA stabilization. Whether building specialized systems from scratch, tuning flight physics to perfection, or architecting massive CI/CD pipelines, I bring the technical discipline to guarantee a flawless, release-ready end-user experience.

PROFESSIONAL EXPERIENCE

Kazper Kreative LLC

CEO & FOUNDER

- Execute end-to-end development, handling every aspect of a project from initial prototype to final deployment and storefront management for commercial Steam releases.
- Set up server hosting logistics, manage DNS, and deploy custom data tracking via platforms like Railway, Vercel, and Cloudflare.
- Architect bulletproof CI/CD workflows, Steamworks deployment pipelines, and reliable branching strategies.
- Manage massive 500GB+ Git LFS repositories, optimizing storage for distributed teams.

SensorOps

QA ENGINEER

- Meticulously fine-tune flight dynamics, sub-T/FPV models, and complex hardware integrations for high-fidelity military simulations.
- Optimize physics collisions, stabilize frame rates, and identify critical memory bottlenecks.
- Design “Cold Install” protocols, White-Box QA strategies, and comprehensive smoke tests to stabilize chaotic release cycles.
- Streamline task tracking and team workflows using Jira, Confluence, and Trello.

Team Nebula · Shadows of Beginnings

GAMEPLAY & BACKEND DEVELOPER

- Architect complex backend data systems, database integrations, and overarching gameplay logic.
- Develop robust “Game Feel,” complex inventory economies, town restoration loops, and highly scalable data architectures designed for easy iteration.
- Bridge the gap between design and functionality by engineering responsive, modular interfaces using UMG and Slate C++.

EDUCATION

Full Sail University · B.S. Game Development

EXPECTED JUNE 2026

TECHNICAL STACK & EXPERTISE

Core Engineering	Unreal Engine 5, C++, Blueprints, Multiplayer Data Architecture
UI/UX & Systems	UMG, Slate C++, “Game Feel” Development, Inventory Economies
Infrastructure	Railway, Vercel, Cloudflare, CI/CD Workflows, Steamworks Deployment
Version Control & PM	Git LFS, Jira, Confluence, Trello
Audio Integration	24-bit / 48 kHz Recording Standards, FL Studio, Audio Production
